By the reaction of SiCl_4 and N_2 in the glow discharge
($\text{SiCl}_3)_3\text{N}$ is formed as a crystalline substance in the
presence of a series of oily and resinous products.
It occurs in two polymorphic modifications of which
the stable has a f.p. of 98° and the unstable of 44°C .
Through condensation by elimination of SiCl_4 from
($\text{SiCl}_3)_3\text{N}$ two series of compounds result, one of
which possesses a cyclic structure and crystalline

Trans. of Association Technique de l'Industrie

DESCRIPTORS: *Paper, *Fiberboard, Driers
(Apparatus).

The Author explains the relationship between factors
affecting the output of drying sections and the quality
of the products, and then reviews the process of dehy-
dration from the forming table and smoothing presses
up to conditioning. The influence of the structure of the
sheet on apparent drying defects is compared with the
effects actually due to drying on the final character-
istics of paper and board. Many methods of conditioning,
humidification, and obtaining uniform moisture content
are considered and illustrated. (Author)
